Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Phase 1 : Preliminary Project Proposal

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Complete every field below and submit as a single PDF document named "SDC2026_TeamName_Preliminary.pdf" before the deadline above. Answers must comply with the word limits stated for each open-ended question. Incomplete submissions may not be eligible for review.

SDC HACKATHON 2026

Phase 1: Preliminary Project Proposal

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Complete every field below and submit as a single PDF document named "SDC2026_TeamName_Preliminary.pdf" before the deadline above. Answers must comply with the word limits stated for each open-ended question. Incomplete submissions may not be eligible for review.

1. Team & Project Overview

Team Name	The Solution 500
Selected Domain	1
Selected SDG Track (1–17)	4, 5, 8, 9, 10
Project / Solution Name	MyCareer
Name (Leader)	Daniel Wilson Gunawan
Email & Phone (Leader)	wilsongunawan123@gmail.com
University Affiliation(s)	Xiamen University Malaysia
Number of Team Members	4

2. Executive Summary & Problem Statement

2.1 The Problem Context

Describe the specific, real-world challenge your team is tackling. Who is affected by this problem, and why does it matter? Highlight the critical social, environmental, or economic issues involved.

[Maximum 250 words]

AI is causing job changes much faster than training plans and competencies can be adjusted. According to a report by Hays Asia Salary Guide, 56% of professionals in Malaysia are using AI but only 26% of them have been trained professionally. According to the Ministry of Science, Technology and Innovation, more than 600,000 workers will need reskill at the moment and in the next couple of years.

There are four groups of people engaged in this issue: working people who may lose jobs; newly graduated people and those changing careers; HR and L&D managers who would like to reskill; and educational institutions. However, in all the four groups there is one concern. People lack knowledge of what skills to learn in AI era; employers do not understand what to train skills for; and learning paths have less practical meaning and importance.

This situation is economically and socially significant to people's lives. Working people can lose jobs or find jobs with low salaries and at the same time organizations could potentially waste money for training with negligible effects.

2.2 The Proposed AI Solution

Provide a high-level overview of your proposed application. How does it apply artificial intelligence to solve the problem stated above? Briefly mention the tools or technical skills gained from the SDC Phase 1 workshops (e.g., GenAI APIs, database architecture, cloud hosting) that you intend to leverage.

[Maximum 300 words]

My Career is an application that allows an individual to go from “who I am today” to “what I can be in the AI epoch” in a matter of minutes. A web app helps humans make career choices but takes no hiring decisions.

Our approach is more than uploading a CV to a chatbot. We use a periodical trend pipeline that allows users to transfer the outdated public data into skill forecasts since these forecasts regulate the role matches, pathways and links with SDGs. Therefore, the results change with changing data.

1. Profile intake: The user chooses his initial status (jobseeker, at-risk employee, beginner in the labour market, employer), fills in a questionnaire or uploads a sample CV, and a language model pre-fills the necessary data. Personality questionnaire is optional and not used to reject candidates.

2. AI signal source analytics: speaks open job ad data and scientific or news articles, stating the information source and date; the skills and occupations are estimated as growing and declining skills on the Future Skills Radar.

3. Matching: matching estimation consists in determining overlapping skills and similarities of embedding for occupations.

4. Pathway: an organized schedule wherein one can compute estimated hours through the help of free, less costly, or HRD Corp-eligible methods.

5. SDG mapping: all roles and competencies appear tagged for SDG objectives; signalers check their Pathway impact.

6. Uncertainty: moderate and fast AI-disruption scenarios are detected with possible estimates as a result of analysis.

GuardRails with the help of which the LLM only extracts and explains the material; it does not create jobs, courses, and statistics. Each recommendation has a reason. And finally, demos include the use of synthesized profiles. We make use of the skills acquired in Phase 1 workshop, for which we use GenAI APIs, database topologies (PostgreSQL), and cloud computing (Replit).

3. Technical Architecture & Implementation Plan

3.1 Conceptual Tech Stack

List the technologies, frameworks, APIs, and databases you plan to use to build a functional, deployed prototype. Describe (or attach as an appendix) a simple system block diagram showing how the workshop elements connect into one architecture.

Did your project utilize any official SDC sponsor-provided GenAI API or Cloud Platform? If yes, specify which one and how it is used.

Our project utilizes three main technologies to develop and deploy a functional web application:

1. **OpenAI Codex:** Primary AI coding assistant used for code generation, debugging, and application development.
2. **Google Gemini:** Used for prompt engineering, image generation, and background video creation to enhance user experience.
3. **Replit (Official SDC Sponsor):** Cloud platform used to run, test, and deploy our web application.

Codex handles application development, Gemini supports creative content generation, and Replit hosts the functional prototype for user access.

3.2 Design-Thinking & Deployment Strategy

Explain how your team applied design-thinking methodology to ensure this solution is technically viable, user-friendly, and ready for real deployment by Phase 2.

[Maximum 200 words]

Empathise: We use information from the four user groups based on the brief and create personas from them (e.g., a mid-career administrative position holder facing the risk of automation, a recent university graduate trying to find their first job). In order to find out needs, we conduct a short interview with peers and the working population.

Define: ONE problem: how to interpret fast changing AI trends data into the next career step for an individual.

Ideate: we've compared using a chatbot with building a data-driven pipeline and selected the latter as it allows verifying and updating the information and references to the sources used.

Prototype: prototyping a Replit proof of concept of the most important chain, feedback loop made up of trend signals and role matching based on synthetic profiles and public information, with public access to the created repository on GitHub.

Test: usabilities conducted with 5-8 peers estimating the time between profile info and work-related ranking and evaluating whether users understood the “estimate” or “match score” given to them.

4. Preliminary Environmental & SDG Impact Framework

To align with SDC's focus on meaningful global sustainability, establish your project's impact baseline before building the prototype. Use estimated data, published research, or public benchmarks where exact figures are unavailable. Provide the citation of any sources used.

The target, baseline, and KPI you provide here will be used by judges during shortlisting to assess ***Innovation and Creativity*** *as well as* ***Feasibility of build****. Vague or unsupported projections may weaken your case for advancing to Phase 2.*

Metric Category	**Your Response**
Target SDG Sub-Target(s) *Identify the exact UN SDG sub-target your project addresses* *e.g., Target 11.6 "Reduce the adverse per-capita environmental impact of cities, focusing on air quality and waste management."*	The primary sustainability development goals are SDG 4, Target 4.4 which states that by the year 2030 there should be considerable increase in the youth and adults providing them with required skills necessary for employment, decent jobs and entrepreneurship while SDG 8, Target 8.5 highlights the importance of full and productive employment for both men and women as well as providing employment opportunities for youth and disabled. As for supporting targets, it is worth mentioning Target 4.3 which focuses on life-long technical and vocational education and Target 8.2 aiming to develop innovative productivity.
Current Problem Baseline *What is the starting condition of the problem, expressed as a number?* *e.g., "The target infrastructure currently experiences 35% energy inefficiency due to unoptimized scheduling."*	There are approximately 26% of professionals in Malaysia who had formal training in AI, while 56% already use AI tools at work. There is a gap of about 30% between training and use of AI tools. More than 600,000 workers need to undergo reskilling in three to five years' time. An assumption for the company's time-to-decision KPI will be depriving it of any research related to published benchmarks; this KPI will be measured in Phase 2 through a manual task related to career research.

Metric Category	Your Response
Core Measurable KPI *The specific unit you will track* *e.g., % reduction in power consumption, processing-latency improvement, or kg of resource waste avoided.*	Main performance indicator: the average time in minutes from when a profile is submitted to when it is recommended for new positions plus the ordered reskilling process. Supporting performance indicators: the percentage of referrals which can be referenced to a dated source; the percentage of test users capable of identifying the next training.
Phase 2 Impact Target *Your realistic, percentage-based target by the final prototype presentation* *e.g., "20% improvement in computational resource use."*	> 80 percent of test subjects (n ≥ 20, including both synthetic profiles and participants who volunteered) achieve roles with rankings, as well as a process within five minutes. 100 percent of the recommended roles, teachings and statistical data backed by cited date sources (the audit confirmed this through checks). ≥ 70 percent of subjects assert that they know next actions they need to take in terms of education. Now these are only the predictions.

5. Eligibility & Readiness Checklist

Tick all boxes that apply before submitting.

- [x] All team members have completed the mandatory GenAI, Database, and Cloud Deployment upskilling workshops.
- [x] The project concept addresses a verified real-world problem mapped directly to one or more UN SDGs.
- [x] The proposed solution targets a functional, deployed application rather than a theoretical business case study.
- [x] All fields in this template have been completed within the word limits stated.

6. IP & Originality Declaration

6.1 Pre-Existing / Prior-Owned Work

Does this submission include any code, design, research, or other work that any team member created or owned before the start of this hackathon?

☐ Yes ☑ No

If yes, briefly describe what was pre-existing and which team member(s) owned it: -

6.2 Third-Party Code, Datasets, or Models

Does your project use any third-party code libraries, open-source frameworks, public/private datasets, or pre-trained AI models that your team did not create?

☑ Yes ☐ No

If yes, list them below (open-source use is permitted provided it is declared and properly licensed/attributed):

Name	Type (code/dataset/model)	License
React	UI/Library	MIT
Vite	Development Server/Build Tools	MIT
Babel	Code Library	MIT
Tailwind CSS	Code/CSS Framework	MIT
Lucide	Code/Icon Library	ISC
PDF.js	Code Library	Apache-2.0
Mammoth	Code Library	BSD-2-Claude
Botpress	Hosted Chatbot Service	Botpress Service Terms

6.3 Employment-Related IP Conflicts

Is any team member currently bound by an employment, internship, or consulting agreement under which their employer could claim ownership of work they create during this hackathon?

☐ Yes ☑ No

If yes, please describe the nature of the agreement and which member it concerns:

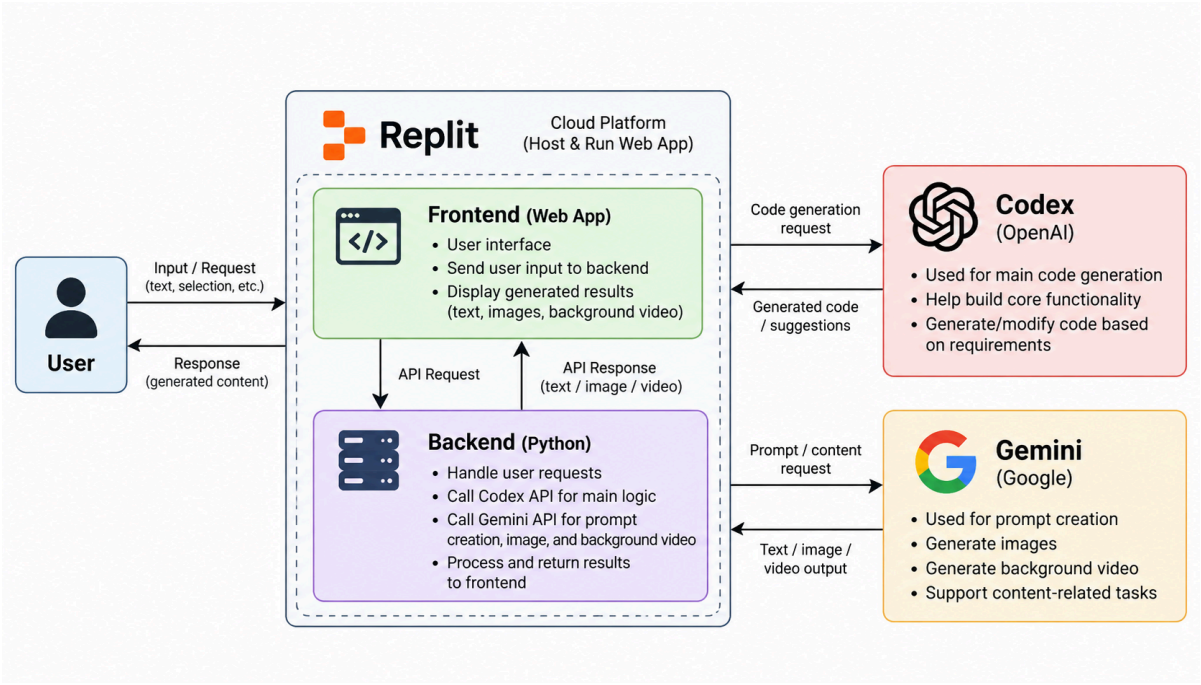

7. Declaration

By submitting this proposal, the team leader confirms that the information provided is accurate to the best of the team's knowledge and that the project will be original work created during the SDC 2026 hackathon period.

24 October 2026
