Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	The Solution 500
Project / Solution Name	FindMyCareer
Name (Leader)	Daniel Wilson Gunawan
Email & Phone (Leader)	wilsongunawan123@gmail.com
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://findmycareer.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/Wilson232/SDC_Hackathon_Solution500

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

FindMyCareer is a career matching service accessible via a web browser that was created using Replit. A job candidate fills out a profile with details including their CV/resume, skillsets, education, experience, preferred position, and place of work before proceeding to the matching service. The match program compares the information given by applicants and agencies and generates the results of the matching process which also includes a heatmap for Malaysia (dark green indicates a good match, dark red denotes a poor match).

Our project employs several AI tools in order to create a career guidance platform. We manually snap and gather job market data from JobStreet as well as information about courses from CourseSkool. The information gathered is analysed using Replit, our application hosting platform and the sponsor of SDC Hackathon. OpenAI Codex is used in the project for the development and debugging of the various applications. Google Gemini helps us with prompt engineering and creating images and videos as well. Finally, Botpress is employed as an AI career coach within the application to answer users' questions.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript / JavaScript; HTML; CSS	Application logic, markup and styling	Languages / web standards
React 18.3.1	Interactive user interface	MIT
Tailwind CSS (CDN; version unverified)	Responsive layout and styling	MIT
Vite ^5.4.10	Local development server	MIT

Name & Version	Purpose in Project	License
Lucide React 0.468.0	Interface icons	ISC
Babel Standalone (version unverified)	Browser-side TSX/JSX transformation	MIT
PDF.js 4.10.38; Mammoth 1.9.0	Reading PDF and DOCX CV files	Apache-2.0; BSD-2-Clause

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Gemini API	Optional personalised AI analysis; prototype has a fallback	Paid
Botpress webchat	In-app career coaching and Q&A	Free

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
React.js	Frontend user interface development	MIT License
Tailwind CSS	Responsive web application styling	MIT License
Vite	Frontend development and build tool	MIT License
Lucide React	Icons and visual components	ISC License
Babel	JSX/TSX code compilation	MIT License
PDF.js & Mammoth.js	CV parsing and document processing	Apache 2.0 & BSD-2-Clause
Apify (Cloud Platform)	Extract job listings and course data	Proprietary / Commercial Terms
Botpress (Cloud Platform)	In-app AI career coaching and assistance	Proprietary / Commercial Terms
Replit (Cloud Platform)	Web application hosting and deployment	Proprietary / Commercial Terms

Service & Provider	Purpose in Project	Plan / Region
OpenAI Codex & Google Gemini	AI-assisted development and content generation	Proprietary / Service Terms

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Gemini 4 Argon	Google / Generative Language API	Pre-trained hosted model intended to be called by API; not fine-tuned by the team. Live calls not verified because the key is blank.	Google API terms
Rule-based Career Guide and fallback parsing	Custom application logic in the supplied source / standalone demo	Hand-authored rules / heuristics; not a machine-learning model.	Project code; no model weights or model licence.
Botpress underlying model	Botpress underlying model	Pre-trained; in-app coaching	Provider service terms (free demo - 100 massages)

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
JobStreet listing snapshot	Manually Snapshot	Self-collected from public listings		N
Skool course catalogue	Manually Snapshot	Self-collected from public listings		N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Sample CVs / profile templates	Team test files included in ZIP	test documents	Generic	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
ChatGPT	Brainstorming, code/UI guidance, wording, and technical documentation for the project.	Moderate
OpenAI image generation via ChatGPT	Visual exploration for the logo/mascot and related design assets.	Minor to moderate
Replit AI	Web developing, programming, UI UX	Moderate to Major
Open AI CODEX	Developing and fixing bug in the website	Moderate to Major
Apify	Scraping data from JobStreet and Skool	Moderate

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The assistance of AI in the creation of code, texts and visual concepts should be verified by the team members as to their correctness, relevance and compliance with the prototype. Prior to sending the product to market, it is necessary for the team to carry out testing of the features related to profile completion, addition of CV/profile into the system, results matching, heatmaps, employer view, interaction with chatbots and navigation. If any results were produced by artificial intelligence and matched the set criteria but were incorrect, the team will solve the issue manually and propose new solution

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Cloud Development & Hosting Platform	Used to run, test, and deploy the FindMyCareer web application, including processing job market and course data.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit was vital in creating, testing, and launching the functional prototype. It offered us an informative cloud service to run our web app and analyze the data about jobs and courses in the labor market. Nonetheless, we do not depend on Replit to enable the app to work, since we may migrate the web app to another host that can support its features without any inconvenience.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

Users can provide personal details in the form of names, job interests, education credentials, and previous job experience. The prototype uses CV text data in the browser and saves the account and profile information in the web browser's localStorage. This way, information is stored on the device and is not kept in a safe production account environment. Although the chat text might get processed by an external service, users should ensure that the API connection to the application is secure. The demo should not involve any sensitive information upload. There is no documented deletion schedule available.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Because the datasets of occupations and courses are snapshots, the availability of job positions, skills, and courses may change over time. The recommendations based on matching algorithms and AI may be incomplete, biased, or inaccurate, and cannot be viewed as accurate career predictions. The APIs of AI may not be available or may be limited in usage since the prototype has a backup solution. LocalStorage of a web browser may not be suitable for working with secure accounts, while scraping by third parties may violate the terms of source websites. The risks described above are addressed by presenting results as recommendations, providing sources for verifying the information, and planning updates of the datasets, stronger authentication protocols, and validation of the results before the implementation.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

24 October 2026
